

## Module-3: ELB Assignment - 1

---

You have been asked to:

1. Create a Classic Load Balancer and register 3 EC2 instances with different web pages running in them
  2. Migrate the Classic Load Balancer into an Application Load Balancer
-

Instances | EC2 Management Console

us-east-2.console.aws.amazon.com/ec2/v2/home?region=us-east-2#Instances:

Apps | Gmail | YouTube | MATLAB Onramp | Code in Place | Course: PYT-eSkill I... | Learn to Earn Cloud... | Looker Data Explor... | AWS Management... | Webminal Player | AWS-Certified-Solu... | Reading list

EC2 > target groups > Create target group

Step 1Specify group details

Step 2Register targets

# Register targets

This is an optional step to create a target group. However, to ensure that your load balancer routes traffic to this target group you must register your targets.

Available instances (2/2)

Filter resources by property or value

Step 7  
Review

## Configure group size and scaling policies [Info](#)

Set the desired, minimum, and maximum capacity of your Auto Scaling group. You can optionally add a scaling policy to dynamically scale the number of instances in the group.

### Group size - optional [Info](#)

Specify the size of the Auto Scaling group by changing the desired capacity. You can also specify minimum and maximum capacity limits. Your desired capacity must be within the limit range.

Desired capacity

Minimum capacity

Maximum capacity

### Scaling policies - optional

Choose whether to use a scaling policy to dynamically resize your Auto Scaling group to meet changes in demand. [Info](#)
